'The Hive'

Interior Architecture

Submission Description

The scope of this Design project was to redesign an existing environment with sustainable practices and processes. The chosen area is the Queanbeyan High School's canteen which will be redesigned by using Computer-Aided Design (CAD) software. The new design must include a screen wood facade on the canteen wall only and the existing structure must not be allowed to be altered. The canteen will also be renamed 'The Hive'.

My submission is a school assignment from year 11, where I redesigned the school canteen using Archicad.
